DORMATHON 2026 · TRACK 2 · WORKBUDDY AGENTIC SOLUTIONS

Peluang

Find the money your business is missing

Team Solo Queue (Lucas Lim) · Taylor's University · *Peluang* = "opportunity" in Bahasa Malaysia

THE PROBLEM

The help exists. Small businesses miss it.

325

government help programmes for small businesses in 2024, worth **RM33.8 billion**, run by many ministries, agencies and states. No owner can check them all

48%

of SMEs surveyed **didn't know they were eligible** for state aid; 65% didn't know how to apply

Each scheme has its own rules, forms and deadlines, so **money businesses are entitled to goes unclaimed**.

Sources: Bernama, 13 Feb 2025 (SME Integrated Plan of Action report, Budget 2024); Transparency International Malaysia, survey of 500 SMEs (2021).

WHAT USER DOES

One sentence in. An application-ready pack out.

"Check what government help my business is missing out on."

Later, after answering Peluang's email on her phone: **"I've replied to your email."** Everything updates.

She gets	What it is
One-page summary	"You could get about RM X", ✅/🟡/❌ per scheme, in plain words
Action plan	Tick boxes: this week, this month, later
Form answers	Copy-ready answers from her own documents + apply link
Note for accountant	Tax reliefs to claim, with workings
One short email	Only the questions it can't answer itself

Never submits anything · never asks for IC copies by email · every tax figure marked "estimate, confirm with your accountant"

HOW IT WORKS

Six WorkBuddy experts, one coordinator

1 Profiler
reads her documents, every fact with its source

in parallel

2 Rule Checker
loads the rulebook and scheme status

→ **3 Matcher**
tests every condition, works out amounts

→ **4 Paperwork**
form answers, accountant note, email via Gmail

→ **5 Checker**
recalculates in code; sends mistakes back

→ **6 Writer**
plain-English summary and plan

Rules are data, not code: rules.json, every condition with its official source and confidence

WorkBuddy is the engine: Experts as sub-agents, Gmail connector, file tools, code

Unattended: ~20 minutes from one sentence to a finished, checked pack

DOES IT WORK?

Measured against hand-checked answers

7 of 8

schemes exactly right, 1 partly right, 0 wrong

6 of 6

planted traps caught (e.g. not eligible for the hawker grant; never asks for IC by email)

The Checker caught its own team's mistakes

Found	Fixed, by recalculating in code
Tax saving RM8,375	RM8,415 (24% vs 15% of RM93,500)
Guarantee fee RM270	RM500: rulebook says "minimum RM500"
2027 savings in this year's total	Moved to "coming soon"

Lina replied by email ("never had a digital grant"): Peluang read it, updated the grant to the **full RM4,000** and re-checked everything, with no human in the loop.

Full method and results: docs/evaluation.md in the GitHub repo (github.com/HZern/peluang). Answers were written before any run and kept outside the agents' workspace.

READY TO USE, READY TO GROW

Any small business. This budget, the next, and beyond.

NOW

Your business

Add your company's documents any time and type the same one sentence. Peluang does the rest.

NEXT BUDGET

Budget 2027

Already listed as "coming soon". When details are out, a quick rulebook update; the agents stay the same.

BEYOND BUDGETS

ESG certification and more

Same six agents, new rulebook: ESG reporting, licences, other government systems.
